## Static and quasi-static loading (for a single anchor)

### All data in this section applies to

- Correct setting (see setting instruction)
- No edge distance and spacing influence
- *Steel* failure
- Rebar B500
- Base material thickness and one typical embedment depth, as specified in the table
- Concrete C 20/25
- Service life: 50 years
- Temperature range I: -40 °C to +40 °C  
(min. base material temperature -40°C, max. long/short term base material temperature: +24°C/40°C)
- Short term loading. For long term loading apply  $\psi_{\text{sus}}$  acc. to EN 1992-4  
Hammer drilled holes, hammer drilled holes with hollow drill bit and diamond cored holes with Hilti roughening tool:  $\psi_{\text{sus}}^0 = 0,88$ ; diamond cored holes:  $\psi_{\text{sus}}^0 = 0,89$

## Setting information

### Installation temperature range:

-5 °C to +40 °C

### Service temperature range

Hilti HIT-RE 500 V4 injection mortar may be applied in the temperature ranges given below. An elevated base material temperature may lead to a reduction of the design bond resistance.

Temperature range	Base material temperature	Max. long term base material temperature	Max. short term base material temperature
Temperature range I	-40 °C to +40 °C	+24 °C	+40 °C
Temperature range II	-40 °C to +55 °C	+43 °C	+55 °C
Temperature range III	-40 °C to +75 °C	+55 °C	+75 °C

### Max. short term base material temperature

Short term elevated base material temperatures are those that occur over brief intervals, e.g. as a result of diurnal cycling.

### Max. long term base material temperature

Long term elevated base material temperatures are roughly constant over significant periods of time.

### Working time and curing time

Temperature of the base material $T^2$	Max. working time in which rebar can be inserted and adjusted $t_{gel}$	Min. curing time before rebar can be fully loaded $t_{cure}^1$
$-5\text{ °C} \leq T_{BM} < -1\text{ °C}$	2 h	168 h
$0\text{ °C} \leq T_{BM} < 4\text{ °C}$	2 h	48 h
$5\text{ °C} \leq T_{BM} < 9\text{ °C}$	2 h	24 h
$10\text{ °C} \leq T_{BM} < 14\text{ °C}$	1,5 h	16 h
$15\text{ °C} \leq T_{BM} < 19\text{ °C}$	1 h	12 h
$20\text{ °C} \leq T_{BM} < 24\text{ °C}$	30 min	7 h
$25\text{ °C} \leq T_{BM} < 29\text{ °C}$	20 min	6 h
$30\text{ °C} \leq T_{BM} < 34\text{ °C}$	15 min	5 h
$35\text{ °C} \leq T_{BM} < 39\text{ °C}$	12 min	4,5 h
$T_{BM} = 40\text{ °C}$	10 min	4 h

<sup>1)</sup> The curing time data are valid for dry base material only. In wet base material, the curing times must be doubled.

<sup>2)</sup> The minimum temperature of the foil pack is +5 °C.

## Setting instructions

\*For detailed information on installation see instruction for use given with the package of the product.

### Safety regulations.

Review the Material Safety Data Sheet (MSDS) before use for proper and safe handling! Wear well-fitting protective goggles and protective gloves when working with Hilti HIT-RE 500 V4.

## Drilling

**Hammer drilled hole**

**Hammer drilled hole with Hollow Drilled Bit (HDB)**

No cleaning required

**Diamond Coring**

**Diamond Coring + Roughening Tool**

For dry and wet concrete only.

Before roughening, the borehole needs to be dry.

## Cleaning (Inadequate hole cleaning=poor load values.)

### Hammer Drilling:

#### Compressed air cleaning (CAC)

for all drill hole diameters  $d_0$  and drill hole depths  $h_0 \leq 20 \cdot d$ .

### Hammer drilling:

#### Cleaning for under water:

For all bore hole diameters  $d_0$  and all bore hole depth  $h_0$ .

**Hammer drilled flooded holes and diamond cored holes:**

For all drill hole diameters  $d_0$  and drill hole depths  $h_0$ .

**Diamond cored holes with Hilti roughening tool:**

For all drill hole diameters  $d_0$  and drill hole depths  $h_0$ .

**Injection preparation**

**Injection system preparation.**

**Injection method for drill hole depth  $h_{ef} \leq 250$  mm.**

**Injection method for drill hole depth  $h_{ef} > 250$  mm.**

**Injection method for overhead application.**

## Setting the element

---

**Setting element**, observe working time " $t_{work}$ ".

**Setting element** for overhead applications, observe working time " $t_{work}$ ".

**Loading the anchor:** After required curing time  $t_{cure}$  the anchor can be loaded.
